

“Although we have always wanted a natural pool, we were put off by the idea of insects and newts in the water. With the Biotop Swimming Pool we can finally enjoy swimming in clean water that is clean, but which does not contain chemicals.”

An Owner of a Biotop Swimming Pool from Hessen

Tried-and-True Components

for perfect pool technology.

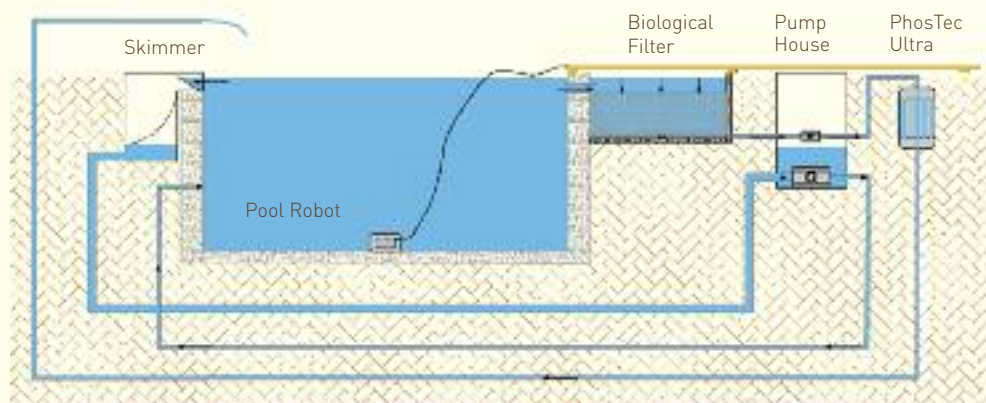

An intelligent combination for perfect water quality.

- The Curved Sieve Skimmer and Submerged Pump House form the first water circulation cycle that only operates approximately four hours per day during the season.
- The biological filter and PhosTec Ultra filter are operated by a second pump in their own water cycle in the Submerged Pump House that circulates the water round the clock.
- The pool robot cleans the floor and walls of the Biotop Swimming Pool independently.

The *Curved Sieve Skimmer* reliably removes impurities from the water surface.

The *Submerged Pump House* houses the pumps which are almost noiseless and require only little maintenance; they remain submerged in wintertime.

The *biological filter* filters impurities out of the water and decomposes them biologically.

The *phosphorous filter »PhosTec Ultra«* replaces the water plants in that, like the plants, it binds phosphorus in the water.

The *pool robot* runs independently and its operating time can be regulated as required.

All the components are concealed under the sun deck – thus there is no need for additional space to house the water treatment.

Peter Petrich Answers Frequently Asked Questions

What is special about the Biotop Swimming Pool?

The Biotop Swimming Pool is the perfect symbiosis of natural water and classic pool design. It requires absolutely no chlorine or other toxic chemicals and still has crystal clear water. In addition, its operation is energy-efficient. I think the pool is a real milestone in natural pool technology.

What kind of customers choose the Biotop Swimming Pool?

For people who decide on a Biotop Swimming Pool, natural water is important but they don't want to share it with animals or plants. And they like the clear design of a classic pool. Other buyers of the Biotop Swimming Pool simply have too little room for a natural pool, which is larger due to its regeneration zone. All of our customers choose our products because they are convinced that they are good. An additional advantage is certainly that it is "in" to be natural.

If I would decide to build a Biotop Swimming Pool today – when would I be able to swim in it?

As we do when we build a natural pool, we take a look at the construction site, and discuss your ideas and wishes with you on site. A few days later we present you with a draft and a cost estimate. Construction itself takes two to three weeks. The pool can then be used immediately. Altogether one can reckon with approximately six weeks.

The Original Biotop SWIMMING-POOL

Swimming in Pure Water

The BIOTOP SWIMMING- POOL

This *perfect symbiosis*
of a traditional swimming pool
and a natural pool offers
first-class swimming enjoyment
in *crystal-clear* water.

The Advantages of the Biotop Swimming Pool:

- water is processed biologically without the use of chlorine
- crystal-clear pure water at all times
- no sediment on the pool walls
- only a small amount of space is required as all the technical equipment is concealed under the sun deck
- can be combined with other elements of the natural pool system

Garden planning and landscaping: Kulmann-Rohkemper, »Your Gardener of Eden«
Pool built by: Daldrup, »Your Gardener of Eden«

The new Biotop Swimming Pool offers
all the advantages of a genuine natural pool
in even a small garden.

The Biotop Swimming Pool looks like a conventional pool but is in fact a fully-fledged biological pool which requires absolutely no chlorine or other toxic chemicals and offers the ultimate in swimming enjoyment in crystal clear water. Instead of a regeneration zone with the plants and wildlife that are required by a natural pool, a biofilter and a specially developed phosphorous filter treat the water on a biological and physical basis ensuring that it always remains pure and clear.
