

WOODHOUSE NATURAL POOLS : POOL CONVERSIONS

If you have a conventional swimming pool we can easily convert it to a natural one.

Eliminating the need for harmful chemicals will reduce the running costs and high maintenance associated with a chlorinated pool.

It makes a far more attractive space which will provide pleasure all year round. Before and after photos shown above.

There are three design options for a pool conversion, these are:

1. Keep within existing pool framework
2. Extend water area outside pool borders
3. Install new Biotop Clear Pool system (regeneration area & filters separate from swimming part)

We use three dimensional design to show you how the conversion will look. The design below shows a pool which has been partly divided up with a curving plant regeneration area and extended out to provide a shallow platform and steps.

Prices for pool conversions are around £350 per m2 (total area inc. filter)
