

Woodhouse Hot Tubs

The Woodhouse Hot Tub is made from Canadian 'Western Cedar' wood. Specially selected low-grain wood from the heart of the tree, creates the best combination of durability, water tightness, insulation and aesthetics.

Chemical and maintenance free, hot tubs are filled with tap water, with a plug for fast drainage.

The aluminium underwater stove guarantees efficient heat transfer to the water. The stove is filled with fire wood and the combination of the adjustable air inlet and chimney gives a quick and steady fire.

Price Range
